               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Full-length cDNA derived from human osteosarcoma cells (given in AAQ89376) encoded human COX-2 (AAR72228). High-level expression of COX-2 in COS7 cells was achieved using a vaccinia or baculovirus vector and a construct in which COX-2 cDNA was attached at its 5' end to a 3' flanking sequence of human COX-1 cDNA (AAQ89377). (Updated on 25-MAR-2003 to correct PN field.)

                                                                       밁
                                                                                                 5
                                                                                                                                                                                                                     This invention relates to a polymucleotide sequence that is a polymorphic CC variant of the human prostaglandin-endoperoxide synthase 2 (PTGS2) gene CC also referred to as cyclooxygenase 2. The human PTGS2 gene sequence ARF80896 contains 27 single nucleotide polymorphisms (SNPs). ARF80896 and ARF80897 represent human PTGS2 gene and coding sequence, and the PTGS2 contains 27 single nucleotide polymorphisms (SNPs). ARF80896 and ARF80897 represented by ARF2199. The invention includes PCR and the PTGS2 sequencing primers, and probes represented in ARF80896 - ARF81151 which care used to isolated and characterise the PTGS2 gene sequence, and to contact the positions of the SNPs. PTGS2 proteins and polymucleotide analysis or drug-binding studies and also in gene therapy (either cappressing PTGS2 or inhibitory RNA). Antibodies raised against PTGS2 are useful for diagnosis, prognosis and therapy and analysis of the new, and especially for determining association between a particular trait, e.g. a consideration process and security or stage. Anti-PTGS2 antibodies are particularly used for developing diagnostic tests and treatments for immune-related considers such as arthritis and inflammation. The polymorphisms may also animals that express PTGS2 are used to study expression and biological function of PTGS2. Transgenic considers such as arthritis and inflammation. The polymorphisms may also animals that express PTGS2 are used to study expression of PTGS2.

```
The present invention relates to methods for identifying genes and condition. The method comprises comparing the transcriptome/proteome of a condition. The method comprises comparing the transcriptome/proteome of a condition with that of a specialised cell type implicated in a disease or condition with that of a conditifying a gene that is differentially regulated in the two experimental conditions, and conditions and conditions are identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a conditions, and for regulating the methods of the invention. The coding sequences and proteins are useful for treating a disease in a conditions, and for regulating tumourigenesis, angiogenesis, apoptosis, biological response to hypoxia conditions, or hypoxic-associated condition, such as cancer, ischaemic conditions, reperfusion injury, conditions, wound healing, inflammation, erythropoiesis or hair loss or conditions, wound healing, inflammation, erythropoiesis or hair loss
                                                                                 8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABB07244;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABB07244 standard; protein; 604 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to genes that encode canine cyclooxygenase (COX)-1 or COX-2 proteins. The COX proteins, especially COX-2 is useful for diagnosing or prognosing a COX-2 related condition in a dog. COX-2 or its fragment is useful for identifying a test material which has the ability to inhibit, suppress, modulate, or maintain canine COX-2 activity. The COX-1 and COX-2 polynucleotides are useful for determining an association between a polymorphism and a trait. COX-2 cDNA molecules and methods provided are also useful for diagnosing or prognosing COX-2 related condition such as arthritis, cancer, neoplasia, inflammation or central nervous system disorder in a dog. The present sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel substantially purified canine cyclooxygenase 1 or 2 protein, for identifying drugs that can reduce inflammation in dogs, and so selective inhibitors of cyclooxygenase-2 protein.

The method CC involves contacting a biological sample from the patient with a CC polynucleotide that selectively hybridises to a sequence at least 80% CC identical to any of the angiogenesis-associated human polynucleotide sequences comprise genes that exhibit changes in CC expression levels as a function of time in tissue undergoing angiogenesis. The method and the polynucleotide sequences of the CC invention are useful for diagnosing and treating angiogenesis and CC angiogenesis-associated diseases e.g. cancer. The polynucleotide cC angiogenesis-associated proteins encoded by the polynucleotide sequences or also useful in the gene therapy of such disorders. The CC angiogenesis-associated proteins encoded by the polynucleotide sequences are also useful in the gene therapy of such disorders. The CC angiogenesis-associated proteins encoded by the polynucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation.

CC ABU03456-ABU03569 represent angiogenesis-associated protein sequences

A claimed vector for use in enhancing wound healing comprises a promoter linked to a COX expression cassette, especially encoding a COX-2 gene product. The vector is used in claimed methods for enhancing wound healing following orthopaedic procedures. A claimed method for treating pathological heterotopic ossification, especially fibrodysplasia ossificans progressiva following hip replacement or acetabular fracture, involves administering COX-2-selective non-steroidal antiinflammatory (NSAID) drugs. The vector is also used in a claimed method for treating osteoporosis, osteogenesis imperfecta and brittle bone conditions. A claimed composition for use in wound healing comprises COX-1, COX-2 or both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel vector useful for enhancing wound healing or treat osteogenesis imperfecta, and brittle bone conditions, copromoter linked to a cyclooxygenase expression cassette.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human cyclooxygenase 2 (COX-2)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             shown to be involved in cancer, in particular breast cancer. COX-2 modulation may be useful in the treatment of any of these disorders. The DNA and protein sequences, including polymorphisms, of the invention may be useful for predicting the clinical response to a therapeutic compound, for determining the therapeutic dose of a compound in the treatment of a COX-2 mediated disease, and for assessing the predisposition of an individual to diseases mediated by COX-2. The present sequence is that of the human COX-2 protein, encoded by the gene in which the polymorphic sites (SNPs) of the invention were identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel isolated nucleic acid, including polymorphic sites (single nucleotide polymorphism; SNP), which is the human cyclooxygenase (COX) 2 gene. COX is the key enzyme involved in the conversion of arachidonic acid to prostaglandins (PGS). PGS are involved in homeostatic functions as well as inflammatory responses. Some of the functions of PGS include blood clotting, ovulation, bone metabolism, nerve growth, wound healing and immune responses. COX is associated with various disease, including fever, arthritis, Alzheimer's disease, osteoarthritis and other bone inflammatory conditions. COX has also been contended to the contended to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 604 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Fig 4; 23pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polymorphic sites in cox-2 gene, useful for determining the therapeutic dose of a compound in the treatment of a cox-2 mediated

The present sequence is that of a breast cancer specific marker (BCSM) CC encoded by a gene identified by microarray gene expression analysis as the procession in the present cancer in comparison to healthy tissue. The BCSM was identified as prostaglandin endoperoxide synthase 2 (PTGS2). This was previously reported to be undetectable in mammary invasive carcinomas and was more likely detected in ductal carcinomas in situ. CC expressed in the invention that are concided by breast cancer specific genes (BCSGs) which are differentially carcinomas in section compared to control cell lines and breast cancer tissue samples as compared to control cell lines and breast cancer tissue samples as compared to control cell lines and breast cancer by measuring expression compared to control cell lines and breast cancer by measuring expression composition for the treatment of breast cancer by measuring expression composition for the treatment of breast cancer comprises a BCSM, an analyse of BCSM, and in particular the level of polynucleotides composition for the treatment of breast cancer comprises a BCSM, an accomposition for the treatment of breast cancer comprises a BCSM, an accomposition for diagnosing breast cancer or screening agents that most of a BCSM. A biochip for diagnosing breast cancer or screening agents that the composition cancer comprises a BCSM and accomposition breast cancer comprises a BCSM and accomposition breast cancer comprises a BCSM or an accomplete that most cancer comprises a BCSM and accomplete that most cancer comprises a BCSM or an accomplete that most cancer comprises a BCSM or an accomplete that most cancer comprises a BCSM or BCSM and accomplete that most cancer comprises a BCSM or BCSM and accomplete that most cancer comprises a BCSM or BCSM and accomplete that most cancer comprises a BCSM or BCSM and accomplete that most cancer comprises a BCSM or BCSM and accomplete that most cancer comprises a BCSM or BCSM and accomplete that most cancer comprises a BCSM or BCSM and accomplete the accomp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 121-123; 143pp; English.

(I) is useful for identifying a compound which modulates the activity of (I). A nucleotide sequence encoding (I) can be used for mapping their respective genes on a chromosome, and so locating gene regions associated with genetic disease, identifying an individual from a minute biological sample (tissue typing), and to aid in forensic identification of a biological sample. The present sequence represents a sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 604 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            isolated from human fibroblast will cells. Transfected host cells expressing human PGHS-2 can be used to identify cpds. that modulate pGHS-2 expression and activity. Cpds. that inhibit expression may be used to treat inflammation, e.g. arterial inflammation or pulmonary fibrosis, Alzheimer's disease, stroke, acute head injury, endometriosis dysmenoribea, pre-term labour, cancer and radiation-induced injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PGHS-1, expression of PGHS-2 is responsive to regulatory control. PGHS-2 amino acid sequence was deduced from a DNA clone (AAT59635) isolated from human fibroblast W138 cells. Transfected host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Prostaglandin H synthase-2; PGHS-2; cyclooxygenase; inflammation; pulmonary fibrosis; Alzheimer's disease; stroke; acute head injury endometriosis; dysmenorrhea; pre-term labour; prostate cancer; colorectal cancer; squamous cell carcinoma; breast cancer; oral pharyngeal cancer; stomach cancer; fibrosarcoma; skin cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DЬ
                                 RNA was isolated from a human fibroblast cell line (W138). PCR primers specific for the human PGHS-1 and PGHS-2 sequences were engineered to amplify the coding regions of either one transcript or the other (see AAQ61792-95). PCR products of about 2 kb were generated. Three PGHS-2 clones were sequenced in both directions. The clone comprising the PGHS sequence disclosed in AAQ61790 was selected for transfection. This sequence differs from the human PGHS-2 sequence disclosed by Hla and Heilson, PNAS, 89, 7384 (19920 due to a Glu rather than a Gly at AA pot 165. Mouse PGHS-2 also has a Glu at this posn. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-SEP-1992;

Methods for discovery, development and molecules that inhibit protein folding use of drugs drug lead

Example; Page 37-38; 116pp; English

The present invention describes the identification of protein folding inhibitors (PFI) by determining the ratio of unfolded to folded protein conditions after stress. Identifying PFI compound under protein biosynthetic conditions after stress. Identifying PFI compound under protein biosynthetic conditions after stress. Identifying PFI compound conditions with at conditions with at conficient biosynthetic system under protein synthesis conditions with at confine the compound; and (ii) determining whether the test compound increases in the ratio is indicative that the test compound is a PFI. The confidence of the confidence of drug and confidence of the discovery, development and use of drugs and conditions that inhibit protein folding. The inhibitors can be used in methods to inhibit cellular action of a protein by inhibiting de novo folding in vivo, and optionally in conjunction with the stock treatment. The inhibitors can be used to modulate cellular confidence of processes, e.g. enhancing the immunogenicity of a peptide or protein. The confidence of inhibitors can modulate growth or proliferation of a cell by inhibiting in reversible folding of the protein target. The tests can be carried out using a wide range of procedures therefore making the detection more confidence and flexible for the operator. The present sequence represents human prostaglandin H2 synthase (PGHS-2) used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to genes that encode canine cyclooxygenase (COX)-1 or COX-2 proteins. The COX proteins, especially COX-2 is useful for diagnosing or prognosing a COX-2 related condition in a dog. COX-2 or its to inhibit, suppress, modulate, or maintain canine COX-2 activity. The COX-1 and COX-2 polymnoclectides are useful for determining an association provided are also useful for diagnosing COX-2 condition growing an association provided are also useful for diagnosing or prognosing COX-2 related nervous system disorder in a dog. The present sequence represents a rabbit COX-2 protein, used in comparison studies with the canine COX-2 related nervous system disorder in a dog. The present sequence represents a rabbit COX-2 protein, used in comparison studies with the canine COX-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Fig 3;

The present invention describes an isolated cyclooxygenase type 1 (COX-1) variant polypeptide (I). (I) is useful for identifying a compound which modulates the activity of (I). A nucleotide sequence encoding (I) can be used for mapping their respective genes on a chromosome, and so locating the contraction of the co
